NATURAL IDEA'S BEHIND TRADING

Weekly News letter On Markets

DATE :- 25/03/2013 TO 29/03/2013

**WISH YOU VERY HAPPY
COLORFUL FESTIVAL
Holi.....**

This Week Would Be Colorful Week

Dear Customers.

Last Week Was Pretty Good Week As Given Ranges Matched. Last Week We Given Many Things Like Equity Market Fall Then Commodity Market Negativity And Crude Oil Limitations There After Cotton Crash And Copper Crash And Interesting Thing Is Major Portion Of Our Newsletter Did Well But We Are Not Fully Satisfy With It Because Opportunities Was Not There In Last Week In Metals But Thanks To Equity Markets Crash Which We Forecasted Well.

Now This Week Moon Entering In Leo Which Is Hot House Of Sun And Leo Aspect By Saturn. Mean Negative Sentiments. And Venus Is In House 12th Which Is A Negative House For Venus. Jupiter In 2nd House Which Is Not Favorable For Gold And Sun In 12th House Which Not Favorable For Copper & Equity Markets So Over All Every Thing 7 Out 10 Signals Indicating Negative Trend For Equity Markets .

Note: - We Neither See Any Fresh Up move In Equity Market Nor In Commodity Till 1st Week Of April Month. So Avoid Any high Leverage Trading Just Follow Ranges. Which Are Generated with Astro Waves.

In Next 2 Years We Will See Following Prices In....

In Metals We Will See

Silver Above – 1lac+

Gold Above - 40000+ & In Emerging Markets

Longer Term Sensex Will Cross 29000 & Nifty Will Cross 7000 LevelAs This Prediction We Already Released In Month Of June 2011 (When Nifty Was 4850)

Here Is This Week News letter

GOLD & SILVER OVER ALL TREND

As Per TMW Theory Our Precious Metals Over All Short To Long Term Trend Is Very Positive And We Are Expecting A Very Bright Bull Market With A Target Price Of \$2000+ In Gold Or May Be \$3000+ And \$75 & \$130 In Silver In Next Few Years. So Far In Next 10 Years We Will See Gold Above \$3600 And Silver Above \$320.

GOLD/SILVER FORECAST

Gold Forecast: - This week we see same trend as following from last week. So we will just give you some ranges and advise to trade accordingly. This week gold will trade in range of \$1615 in upper side and \$1580 in lower side.

Now let us concentrate for next 15 days we don't see gold above \$1620 and even if gold try to cross \$1620 then it will not able to go above \$1650 so when ever in coming few days you see gold rising trend just short it.

On Monday we will see some negative trend in Gold and in down side this week it may crash up to \$1580 in upside Sell near \$1615. This whole week looking negative so *we are not much positive on metals so don't make any heavy position during this time*”

Silver Forecast: - This week Silver will also show negative trend as silver looking weaker compare to gold because it's both lord Venus and Moon are aspects with negative planets so we don't see any much upside this time. Our ranges are still same and will remain same. In upside we don't see silver above \$29.45 and negative side doors are open for \$27.50. This entire week looking scary so trade on sell side with little capital.

“First 4 Days Trend Will Be Same – Mean Monday Trend would Remain consist Till Thursday: so If Monday Markets Move Up then Rest Days Also Same Will Revise. And Down Then Gold/Silver Will Fall Till Thursday.

Copper Forecast: - This week copper also looking negative as first 1or 2 days may be there would be some stable trend but after Holi we may see panic. But still it's above \$3.40 level on Forex which is a good support wave for it. So if you want to trade for intraday or weekly then we here advise you buy it when it comes near \$3.40 so your risk would be small and rewards would be great because from this level we may see some sharp recovery for some time.

- *But keep one thing in your mindset that we are not positive for base metals for short term or for permanent basis. We are just recommending you strategy for day trading. Over all view in copper would be remain powerless. And 1 weekly close below \$3.40 will open doors for \$2.90 .*
- *In Mcx this level would be 375. If lose below 410 for an entire week.*

Crudeoil/Energy

Crude Oil:- This week crude oil would remain in range of \$91.80 in down side and \$94.60 in upside and once it's moved toward \$94.50 will open doors for \$97 and we see crude oil will hit it with time because we are very positive for crude oil so this week you can use two strategies.

1 – Buy if come near \$91.80 (means buy if come near \$92.4—\$92 between)

2- Buy More if move above \$94.5 and stay above this for some time.

Well we will suggest you more and update you time to time by weekly update area so don't worry.

In long term we are very positive on crude oil and natural gas because we are getting very big targets from our indicators – try to believe but Crude oil ready to move toward 5700—6000 by year end.

Natural Gas: - Natural gas looking weak this time but we are getting very strong positive signals for it. According to current situations natural gas may correct 2-3% from present price. But suppose if its success to move above 220 or Spot level \$4.00 then we will see target of \$5.50 means a huge target of 40%.

This time we just suggest you keep wait Astro charts of natural gas giving 50-50 signals which cause to be reason for sharp panic or sharp rise in both sides so avoid buying here. You can sell with stop loss of 220—225 Closing basis.

NCDEX

Last week we recommended exit call from Cotton and TMC and both scripts crashed. Now present planetary situations still indicating negative signal for Cotton and Cotton Seed. This week we don't see any major rise in white commodities' traders can buy maize this week for target of 1370—1400 near.

Equity Market News Letter

Nifty

Nifty: - This week once again we may see panic round as none of planet giving positive signal for equity market right now. So when 65% planets giving negative signals then markets always crash. So we advise you to sell on rise present time is correction time. And during this correction we may see more 5-7% crash in nifty. It's likely indicating that Nifty may hit 5450—5500 level in coming days in first half of April month.

This week negative trend will remain all over weak any rise if arise then short only.

In this fall we may see negative trend in major sectors like Reality/Banking/financial and insurance sectors.

This week Nifty would trade in range of 5745 in upside and 5567 in down side.

Note: - After a sharp correction of 200 points it's generally looks that nifty may show some 50 points rally but we advise you to short only.

In Longt Term By 2014 We Will See Sensex 30000+ & Nifty 7000+

Stock Investment Advise This Week.

Buy Sms Pharma , Cholamandalam, Akzo Nobel..Etc.

USD/INR

Indian economy planetary situations not in favor of rupee for now so we advise to buy USD and wait for some time as for next 10—15 days situations indicates that markets may show sharp panic in Rupee. And during this panic Rupee can fall further up to 55 marks.

Best Trades :- Sell Nifty /Sell Metals on Rise/Sell Cotton Seed and Cotton.
